

WEARING MASKS

A Woman and Child Wearing Masks at a Grocery Store

Many people are wearing masks in public places now. Many scientists think masks can help stop the spread of the coronavirus. The coronavirus spreads from person to person through germs. Germs are very small! People who are sick can spread germs when they cough, sneeze or talk. Masks cover people's mouths and noses. Masks may help stop germs from spreading to other people. Some people are buying paper masks to wear. Some people are making masks out of cloth. Some businesses require customers to wear masks.
